- 5 entitled "A Method of Content Adaptive Video Encoding" filed concurrently herewith
 and which is incorporated herein by reference; *U.S. Serial 09/374879*
~~Attorney Docket~~ Number ~~2001-0161B,~~
- entitled "A System for Content Adaptive Video Decoding", filed concurrently herewith
U.S. Serial 09/374878
 and which is incorporated herein by reference; ~~Attorney Docket~~ Number ~~2001-0161C,~~
- entitled "A Method of Content Adaptive Video Decoding" filed concurrently herewith
U.S. Serial 09/374877
 and which is incorporated herein by reference; and ~~Attorney Docket~~ Number ~~2001-~~
 10 ~~0161D,~~ entitled "A System and Method of Filtering Noise" filed concurrently herewith
 and which is incorporated herein by reference.

FIELD OF THE INVENTION

15 The invention relates to the encoding of video signals, and more particularly,
 content adaptive encoding that improves efficient compression of movies.

BACKGROUND OF THE INVENTION

20 Video compression has been a popular subject for academia, industry and
 international standards bodies alike for more than two decades. Consequently, many
 compressors/decompressors, or coders/decoders ("codecs") have been developed
 providing performance improvements or new functionality over the existing ones.
 Several video compression standards include MPEG-2, MPEG-4, which has a much
 wider scope, and H.26L and H.263 that mainly target communications applications.

25 Some generic codecs supplied by companies such as Microsoft® and Real
 Networks® enable the coding of generic video/movie content. Currently, the MPEG-4
